

## **Principles of Lean Manufacturing seminar**

Tue, Feb 23

*Place:* Burlington, Ont.  
*Times:* from 09:30 to 03:30  
*Web Site:* [http://www.boschrexroth.ca/country\\_units/america/canada/en/training\\_and\\_seminars/seminar\\_series/principles\\_of\\_lean\\_manufacturing/course\\_detail/index.jsp](http://www.boschrexroth.ca/country_units/america/canada/en/training_and_seminars/seminar_series/principles_of_lean_manufacturing/course_detail/index.jsp)  
*Category:* 2010 Events

### *Additional Information:*

Learn and apply the principles of lean manufacturing to your operations, and reap the benefits: processes for identifying and eliminating waste, improved worker productivity, quality and input into your production processes, and greater manufacturing flexibility and return on investment.

### **Who should attend**

Manufacturing line and plant-wide managers, supervisors and lead operators/manufacturing team leaders; systems and line engineering personnel concerned with manufacturing line processes, quality, cost and inventory control. Senior management charged with enterprise-wide process improvement and overall manufacturing operations, capital investment and resource allocation management will also benefit from detailed presentations on lean practices and strategies.

### **How it can help you**

Attendees will improve their understanding of fundamental lean principles and their practical application to real-world manufacturing challenges. Simulations and case histories will provide examples of successful lean process improvements; attendees will also learn how to use planning tools and a range of free design and educational resources to make better use of manual and automation technologies to sustain lean manufacturing operations.

**Cost:** Free
